

Enagas certifies the quality of its global measuring process according to the UNE-EN ISO 9001:2000 regulations.

Enagas natural gas Global Measurement Process has been awarded certification from the Quality Management System for all its centres and facilities, in accordance with the UNE-EN ISO 9001:2000 standard.

This certification, issued by Lloyd's Register Quality Assurance and accredited by ENAC (the National Accreditation Agency) and UKAS Environmental Management, shows clear recognition of the commitment Enagas has made to Quality over the past few years.

The news brings with it a guarantee for gas system agents that the gas measurement process is being carried out in a manner that is totally transparent, impartial and objective.

This recognition comes as part of a global plan to extend the Quality Management Model to all those processes and functions for which Enagas is responsible as Technical Manager of the Gas System, and in its role as transporter.

Enagas has also introduced and certified an Environmental Management System, based on the UNE-EN ISO 14001 standard, which guarantees compliance with applicable environmental legislation and the continual improvement of environmental behaviour.

AENOR has awarded environmental management certification to all of Enagas' production units.
