

Demand for natural gas in Spain set a new summer record on 20 June of 1,403 GWh.

- On that day, demand for natural gas for electricity generation also set a new record, with 754 GWh

Demand for natural gas in Spain set a new summer record on Friday 20 June of 1,403 GWh. This is a 13% increase on the previous summer's record of 1,239 GWh which was reached on 19 July 2007.

In addition, on that day, demand for natural gas for electricity generation also set a new record of 754 GWh, 2% more than the previous record of 742 GWh set on 14 December 2007.

On Friday the weight of the contribution from combined cycle thermal plants to electricity generation reached 48% due to the increase in temperatures, low wind generation and a significant decline in generation from coal-fired thermal plants.

NOTE: Please see the attached document on the new record for demand for natural gas for electricity generation.

RECORD

Gas deliveries for electricity generation: 20 June, 2008

Outline of gas delivery schedule

Gas for the electricity sector

	Previous 14 Dec-07	Current record 20 Jun 08	
GWh/day	742	754	+2 %
Thermal power stations	24	29	+18 %
ccgt	717	725	+1 %
no. ccgt	51	54	
Utilisation factor ccgt	78%	75%	
Peak demand Nm³/h	2,904,529	2,913,690	+0.3 %
Peak hour	11:00 h	15:00 h	

Deliveries by region 20-jun-08 (GWh/day)

Andalusia	154.9
Aragon	63.7
Asturias	13.6
Castilla-Mancha	33.1
Catalonia	79.8
Galicia	53.0
La Rioja	33.6
Murcia	125.7
Navarre	42.0
Basque Country	63.3
Valencia	91.1
