# Enagás and CEAR sign a collaboration agreement to develop a green hydrogen terminal in Aragón

- The two companies will work together to promote green hydrogen in Spain

**Madrid, 21 December.** Enagás, through its subsidiary Enagás Renovable, and Compañía Energética Aragonesa de Renovables (CEAR) have signed a collaboration agreement for the joint development of a green hydrogen terminal in Aragón.

The project foresees the development of up to 103 megawatts of electricity (MWe) from the hybridisation of solar and wind energy and 30 megawatts (MW) of electrolysis for the production of green hydrogen.

This project fits perfectly with the two companies' commitment to developing new energy solutions that will help advance the European Union's decarbonisation goals and a more sustainable energy model. It also highlights the synergies between different renewable energy sources and the production of green hydrogen to drive the energy transition.

Enagás, together with more than 60 partners, promotes 55 specific renewable gas projects throughout Spain (34 green hydrogen projects and 21 biomethane projects) and works on three main lines of action: the development of renewable gases and their integration into existing gas infrastructures; the promotion of new gas applications in sectors such as transport, especially maritime transport; and energy efficiency as a means of optimising resources and reducing emissions.

For CEAR, this project represents another step in the implementation of its strategy to realise innovative projects that not only enable the integration of various renewable generation sources, but also contribute decisively to the development of green hydrogen as a first-rate energy vector for the decarbonisation of certain industrial sectors.

### **About Enagás**

Enagás is a Transmission System Operator (TSO) with 50 years' experience in the development, operation and maintenance of energy infrastructure, and carries out its activities in eight countries: Spain, the United States, Mexico, Chile, Peru, Albania, Greece and Italy. The company has over 12,000 kilometres of gas pipelines, three strategic storage facilities and eight regasification terminals. In Spain, it is the leading natural gas transmission company and the Technical Manager of the Gas System.

Enagás has pledged to be carbon neutral by 2040 and is firmly committed to the decarbonisation process. The company is a global leader in its sector in the Dow Jones Sustainability Index (DJSI), according to the latest revision of this indicator, is included in the S&P ESG Index and has received the highest rating in the CDP Climate Change Ranking, as well as numerous other distinctions.

## **About CEAR**

CEAR is a company founded in 2014 that specialises in the development of renewable energy generation projects and has developed a portfolio of its own projects with a capacity of over 700 MW in recent years. Some of CEAR's leading shareholders already had extensive experience in the renewable energy sector, both nationally and internationally, before the company was founded, having been directly and indirectly involved in the management and development of around 1.2 GW.

If we had to highlight one particular element of the projects developed by CEAR over all these years, it would be its firm commitment to the endogenous development of the territory, which means not only the search for solutions with the lowest possible environmental impact, but also the ability to approach these actions with absolute respect and consensus with the interests of local stakeholders.
