

Warning of low temperatures

According to the current weather forecasts of the State Meteorological Agency, a **warning of low temperatures** is expected from **25 to 26 December 2025** following the criteria defined in the current Winter Action Plan for the operation of the gas system(*).

The predicted temperatures result in **extraordinary demand increase with respect to the expected values under normal conditions of 259 GWh depending on the temperature predictions evolution in the period from December 25 to 26 when is expected to conclude**. The current stock levels in LNG and underground gas storage tanks are sufficient to meet this extraordinary demand.

Thermogram with temperature alarms is attached.

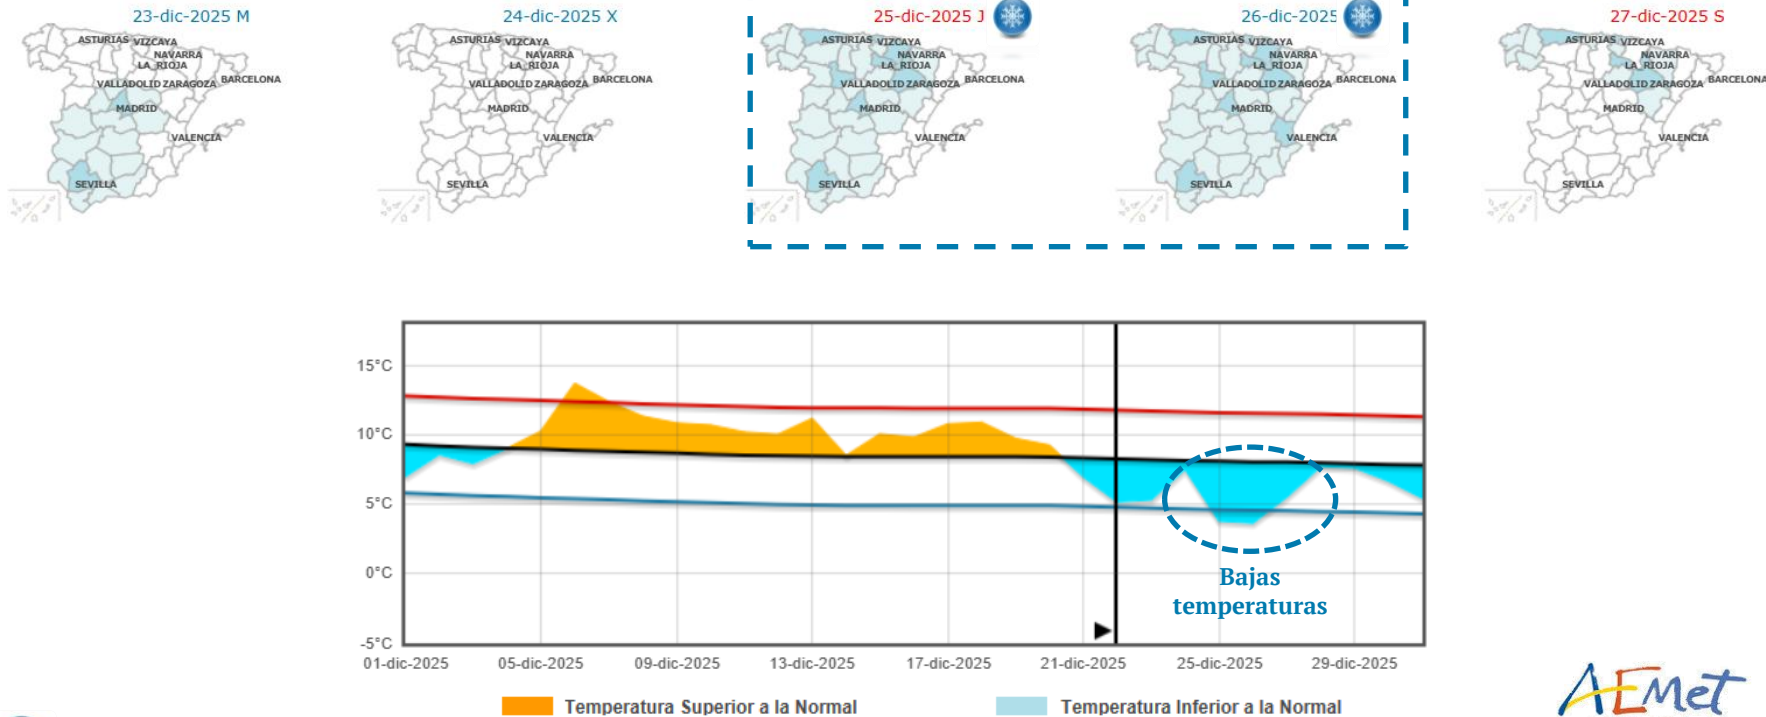

Extraordinary demand increase expected is attached

(*) Resolution of 30 September 2025 from the Directorate General for Energy Policy and Mines, amending the Winter Action Plan for the operation of the gas system ([enlace](#))
