

# Operation note nº 09 – 05.11.2019

## Statement Exceptional Operation Situation of Level 0

---

Due to the current situation of gas oversupply in the Spanish Gas System originated by higher temperatures during October and first days of November in comparison to standard values of the last 10 years, as it is established in the section 10.6 of the “Normas de Gestión Técnica del Sistema (NGTS)”, it is stated Exceptional Operation Situation of Level 0.

In order to minimize as far as possible the delays applied on the vessel discharge programs of all LNG terminals in November-2019, and following the established measures in the section 10.6.1 of regulation (NGTS), the GTS proceed to modify the set points of underground storages maintaining the gas injection during the month of November. This situation will be reversed during December-19, taking this into account on the December’s monthly program.

This measures do not have effects on user’s extraction rights of underground storages because shippers extraction cycle starts from 1-nov-2019 as planned.
