

Operation Note n° 6/2021 - 18.03.2021

Warning of low temperatures

According to the current weather forecasts of the State Meteorological Agency, a **warning of low temperatures** is expected from **18 to 21 March 2021** following the criteria defined in the Action Plan winter for the operation of the gas system of 27 November, 2017.

The predicted temperatures result in **extraordinary demand increase with respect to the expected values under normal conditions of 470 GWh depending on the temperature predictions evolution in the period from March 18 to 21 when is expected to conclude**. The current stock level in LNG tanks allow to meet this extraordinary demand.

Thermogram with temperature alarms is attached.

Extraordinary demand increase expected is attached

Operation Note n° 6/2021 - 18.03.2021

Warning of low temperatures

Thursday, March 18, 2021

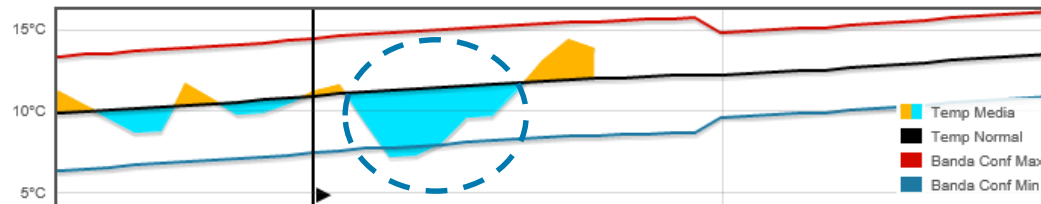

Temperature in the Spanish Gas System

Temperatura Superior a la Normal

Temperatura Inferior a la Normal

Low Temperatures

Operation Note n° 6/2021 - 18.03.2021

Warning of low temperatures

The **extraordinary increase** in gas demand compared to the expected values under normal temperature conditions accumulates between March 18th and March 21th **470 GWh**.
